

Files can be compressed on mobile, both with iOS and Android.

For iOS, either use your built-in "files" app, and multi-select the deliverables, and select compress from the menu. Otherwise, iZip is a free app found on the app store.

For Android, the process is similar. In your file browser, you can multi-select deliverables, and compress them. Otherwise, WinZip, RAR, and 7zip are all available on the google play store.
